EDUCATION

University of Massachusetts Amherst

Amherst, MA

Manning College of Information and Computer Sciences

B.S.: May 2026; M.S.: May 2027

B.S./M.S. in Computer Science

GPA: 3.92

- **Accomplishments:** Chancellor's Award, Dean's International Scholarship, Dean's List (Fall '22 -> Spring '26), Manning Undergraduate Student Impact Committee Member, Undergraduate Course Assistant
- **Courses:** Data Structures, Systems Programming, Programming Methodologies, Algorithms, Operating Systems, Artificial Intelligence, Software Engineering, Machine Learning, Digital Forensics

EXPERIENCE

NVIDIA Corporation

Austin, TX

Solutions Architect Intern

May 2026 - Sep 2026

- Built 3 stages of an AI-assisted deployment pipeline—PDF ingestion, vision-language extraction, and rack-layout generation—cutting first-draft plans from hours to minutes
- Independently modeled rail-only and Spectrum-X topology tradeoffs for a 32,768-GPU fabric, deriving switch, link, and transceiver counts and an HB-domain sensitivity analysis with 38-77% modeled cost reduction
- Supported AI-factory cluster bring-up across 11 CVT-operator shifts, triaging and routing 195+ Ethernet cabling and hardware issues to various contractors and owning teams

Dell Technologies

Round Rock, TX

Software Engineering Intern

May 2025 - Aug 2025

- Built end-to-end, customer-facing monitoring features for container pod management, reducing manual data collection time by 82% through automated real-time sensor data retrieval
- Automated issue detection and response by engineering a notification pipeline that alerts stakeholders of abnormal conditions across 10+ units, reducing downtime by 50% & ensuring 24/7 system visibility

Dell Technologies

Hopkinton, MA

Software Engineering Intern

May 2024 - Aug 2024

- Converted and developed 400+ Python test cases for the iDRAC Networking team, migrating legacy validation workflows to the ATLAS automation framework for next-gen PowerEdge servers
- Applied AI-driven code analysis to streamline test automation, increasing code coverage 15% and reducing weekly testing cycles; authored 10+ pages of technical documentation

Human-Centered Robotics Lab - UMass Amherst

Amherst, MA

Undergraduate Researcher

Sept 2023 - May 2024

- Developed comprehensive simulations on Linux utilizing Python and leveraging open-source solutions built on Unreal Engine for creating high-fidelity simulations of the UMass campus
- Evaluated connected autonomous driving algorithms & contributed to poster presentations and team-based research outcomes

PROJECTS

TutOrin (Python, Faster-Whisper, Qwen2.5, Piper TTS, Ollama, Linux)

- Built an offline oral-exam agent on a Jetson Orin Nano, orchestrating speech-to-text, LLM grading, and text-to-speech feedback without cloud/API dependencies
- Delivered end-to-end spoken feedback in 30–60 seconds, keeping 3 local models in memory and supporting zero-configuration multilingual interaction

Edibly (Node.js, React, Express, PostgreSQL, Supabase, Auth0, Render)

- Built an end-to-end full-stack web application delivering personalized meal recommendations based on allergies, dietary needs, and campus location
- Designed and implemented REST APIs for authentication, profile filtering, and real-time dining hall search

ATC Simulator (C/C++, Threads, Locks, Bounded Buffers, OS Scheduling)

- Simulated a multithreaded air traffic control system with efficient runway resource management
- Implemented custom scheduling algorithms to minimize fuel loss and delays, outperforming FIFO baselines

SKILLS

- **Languages:** Python, Java, JavaScript, TypeScript, C/C++, SQL, HTML, CSS
- **Frameworks:** React, Express, Node.js, JUnit, Pandas, NumPy, PyTorch, scikit-learn, Pytest, Selenium, Next.js
- **Development Tools:** VSCode, Atlassian, MongoDB, PostgreSQL, MySQL, Linux, Docker, Kubernetes, Git
- **Technical Areas:** REST API, CI/CD, Frontend, Backend, RDBMS, Agile/Scrum, Quality Assurance
